At its December, 1987, meeting, the Board of Medical Examiners of the State of North Carolina reviewed reports indicating that you are pursuing the practice of chelation therapy outside the confines of your clinic.

It is the position of the Board of Medical Examiners that physicians should administer chelation therapy only when this treatment is part of a research protocol. Moreover, the Board understands there are physicians in Massachusetts utilizing an approved research protocol and conducting this type of therapy.

On December 4, 1987, the Board of Medical Examiners unanimously adopted a motion made by Dr. Godwin and seconded by Dr. Henry that the Board respond to Dr. Duffy's request for full, unrestricted medical licensure in the state of North Carolina as follows:

At its December, 1987, meeting, the Board of Medical Examiners of the State of North Carolina considered your request for a full and unrestricted license to practice medicine in this state.

As a result of this consideration, the Board advises North Carolina General Statutes require a physician to complete three years of postgraduate training and education, approved by the Accreditation Council for Graduate Medical Education, in order to be eligible for full medical licensure in this state.

Although you indicate you have met the standards for eligibility set forth by the American Board of Psychiatry and Neurology, these standards do not meet the statutory requirements for full and unrestricted medical licensure in the state of North Carolina. Therefore, the Board of Medical Examiners must deny your request for a full license; however, the Board has approved the extension of your dated, limited license for a period of two years.

If you wish medical licensure in this state after December 15, 1989, please notify the Board prior to the expiration of the enclosed license.
